Hi

My name is Graham Robinson and I am a freelance programmer coding everything from small websites in .NET to enterprise level systems in J2EE / JSP

I have often found myself (mostly when swapping between languages) needing to lookup the syntax/method for seemingly simple things. In order to save some time I decided to host a small website where I could keep them.

So here it is - a growing collection of tips which I come across during my travels - each one references the internet page where I found it - if you want to know more about the subject.

I hope this is as useful to everyone as it will be for me - feel free to let me know what you think via the contact me link

Thanks for reading

Graham
