

How to resize an image in asp.net

Monday, 25 May 2009

To resize an image use the following code

where imgHeight and imgWidth is what you want to image to be

```
Dim oImg As System.Drawing.Image = System.Drawing.Image.FromStream(fileUpload.PostedFile.InputStream)
Dim oResized As System.Drawing.Image = New Bitmap(imgWidth, imgHeight)
Dim oGraphic As Graphics = Graphics.FromImage(oResized)
oGraphic.CompositingQuality = Drawing2D.CompositingQuality.HighQuality
oGraphic.SmoothingMode = Drawing2D.SmoothingMode.HighQuality
oGraphic.InterpolationMode = Drawing2D.InterpolationMode.HighQualityBicubic
Dim oRectangle As Rectangle = New Rectangle(0, 0, imgWidth, imgHeight)
oGraphic.DrawImage(oImg, oRectangle)
oResized.Save(actualPath & fileName & ".jpg", System.Drawing.Imaging.ImageFormat.Jpeg)
oImg.Dispose()
```
