

Backup metadata in IIS7

Friday, 25 September 2009

Last Updated Friday, 25 September 2009

To backup the metadata data in IIS7 use

```
appcmd.exe add backup backupname
```

to restore

```
appcmd.exe restore backup backupname
```

appcmd can be find in \Windows\System32\inetsrv

The commands actually copy the \windows\system32\inetsrv\config\applicationhost.config xml file

The backups are stored under \windows\system32\inetsrv\backup\backupname
