

List connections on sql server 2008

Sunday, 13 December 2009

How do I list all of the connections or view the total connections in use on SQL Server 2008

The answer is in this little script

```
SELECT DB_NAME(dbid) as 'Database Name',  
COUNT(dbid) as 'Total Connections'  
FROM sys.sysprocesses WITH (nolock)  
WHERE dbid > 0  
GROUP BY dbid
```

Thanks for <http://www.sqldba.org/.../18-view-database-connections-in-sql-server.aspx>

Its a life saver
